Building Affordable House Plans

Armstrong's Off-Site Method Leads to Savings

While some builders cut costs by lowering the quality of their products, Armstrong Homes saves you money by designing more efficient plans!

With our on-site design department, we can design your home to be built by our off-site panelized wall & engineered truss method more efficiently. This leads to less waste at the jobsite, faster build times, less construction loan interest, & overall tighter homes.

Some of the methods Armstrong uses to build affordable house plans include:

Stock Floorplans—These customizable stock floorplans have been value engineered for cost savings. They can be simplified to fit into a budget and/or cus-

tomized for aesthetic detail.

Prefabricated Walls—

Armstrong's walls are laser cut at our factory and typically come with siding and windows in-

Our wall panels come with the siding applied at our plant. Thus saving time and labor at your jobsite!

stalled. This = less waste at the jobsite, time savings, & labor savings.

Engineering Trusses— We utilize the Mitek Truss program to design and build Roof & Floor Trusses more efficiently.

Millwork & Door Shop—Our in house Millwork & Door shop provides the trim details, mouldings, & doors. With our own stain & paint booths, our materials come ready to install on the jobsite., yet another time and cost saver.

All of these benefits lead not only to cost savings, but also the quality & consistency you will not find with another home builder!
